The Berkeley Lamp II |

Full Spectrum Solutions

www.fullspectrumolutions.com

The Berkeley Lamp II is engineered as two lamps in one. Its patented lighting system with independent bulbs allows for upward, downward or combined lighting. It is both task and ambient lighting, cutting energy use by up to 75 percent. Designed as a tailored addition to any décor, The Berkeley Lamp II is a green solution developed by Full Spectrum Solutions in partnership with the California Lighting Technology Center at the University of California, Davis, with support from local California utilities and funding from the California Energy Commission's PIER Program, along with the U.S. Department of Energy.
